

## **TOPIC: BANKING DIGITAL EXPERIENCE**

### **INTRODUCTION:**

A digital bank represents a virtual process that includes online banking and beyond. As an end-to-end platform, digital banking must encompass the front end that consumers see, and the back end that bankers see through their servers and admin control panels - and the middleware that connects these nodes. A digital bank should have all the same functions as a traditional bank in terms of head office, branch office, online service, ATM and point-of-sale (POS) machines. Pay generates a unique, encrypted number instead of your actual credit card number when registering an online transaction. This virtual account number is removed if screen lock is disabled on the user's device - and can be changed after a transaction has been completed.

### **SCOPE:**

Fast and secure Transactions, Convenience is queen. Offering the ability to access, use and move money via mobile devices, digital banking apps lets your customers see their account balances, pay bills, transfer money, apply for loans and make purchases on the go. There's no need to sit in front of a computer to make online payments or come into a branch.

### **OBJECTIVES:**

To Offer customers interest on deposits, helping to protect against money losing value against inflation. Lending money to firms, customers and homebuyers.

### **TOOLS:**

- HTML
- CSS
- JAVASCRIPT
- PHP
- DATABASE

**CODE:**

**1. Index.html**
